

## Efficient Transportation Planning and Execution

### The Challenge

Managing the procurement, planning and execution of transportation across modes and controlling transportation costs requires close oversight. Streamlining inbound and outbound logistics while monitoring contract compliance and keeping up with carrier capacity constraints and rate changes are daunting tasks.

### The Solution

Softeon Transportation Management makes planning, optimizing and executing international multi-modal transportation easy. Build shipments and routes based on a powerful rules engine for shipment optimization that supports all carriers and modes. You gain improved control over logistics processes to reduce transportation spending and improve customer service.

### Softeon Transportation Management

Softeon Transportation Management allows logistics managers to see the big picture of carrier management with real-time visibility of transportation data to reduce transportation costs and optimize transportation planning. The solution supports optimized mode and carrier selection, optimized consolidating and routing, automated load tendering and acceptance.

Robust alerting, reporting and analytic tools facilitate carrier management and contract compliance. Managers receive real-time alerts of service issues and exceptions to manage SLAs and ensure shipments are delivered on time and against agreed-upon rates.

Softeon Transportation Management easily integrates with other enterprise and supply chain systems in addition to connecting with your carriers via the web or EDI to streamline operations and facilitate partner collaboration. The execution tool creates carrier-compliant labels, shipment documents and export documents.

### Key Features:

- Automatic load tendering and carrier manifesting
- Rules-based rate shopping engine finds the lowest rate after examining basic rates, discounts and accessorial charges
- Consolidate loads across modes for additional cost savings
- Rules-based freight invoice auditing with automatic notification: avoid overcharges and receive alerts for monitoring SLAs to ensure shipments are delivered timely and against agreed-upon rates

### Softeon Transportation Management:

- Trailer loading optimization
- Automated carrier selection
- Routing
- Shipment consolidation
- Carrier complaint labeling
- Export documents
- EDI/XML interfaces
- Carrier performance analysis
- Shipment tracking

### Product Benefits:

- Gain control of logistics processes
- Optimize transportation planning
- Reduce transportation spending
- Deliver shipments on time
- Improve customer service
